

PB-200 / 400 Traction Motors

Features

Application

The PB Series is developed especially for Skid Steer Loaders

All-in-one Design

All required components related to the drive system are in one complete unit.
Planetary Gearbox, Hydraulic motor, Mechanical Negative type Brake,
Flushing Valve and Sprocket.

Compact

Our experience in building compact motors is due to our vast knowledge of the heat treatment process. Therefore, the total envelope size remains compact.

High Reliability

All of the main components are designed and tested by NACHI to ensure quality quality and reliability.

High Efficiency

The Axial Piston motor maintains very good efficiency through out the entire pressure range.

Design

The PB Series is developed for Skid-steer Loaders and designed to meet the heavy-duty demands required.
